

X 1 FD

PASSIVE CROSSOVER. This filter is born to match with our midranges. The presence of four different Q-factors makes this filter one of the most versatile band-pass in the market, with the possibility to be added to a two-way system filtered like with the X 2V. The application of the midrange as a "Filler Driver", allows its integration in a two-way system, creating a new three-way system, in which the mid is inserted with maximum care for the acoustical phase and for the global sound emission.

DESIGN FEATURES

- ORDER : Band-pass 6dB/oct direct or attenuated with three different levels.
- CROSS-OVER FREQUENCY : Variable due to the selected position.
- ATTENUATION LEVEL : Variable in four positions.
- SUGGESTED LOUDSPEAKERS : Midrange M35 , M40 , M50, normal or NEO .

X 1 FD ELECTRIC WITH M40 (POSITION FLAT-Q3)

X 1FD PHASE SIMULATION W 600 + M40 + T100
